## In the Claims

The listing of claims will replace all prior versions and listings of claims in the application.

## **Listings of claims**

- Claim 1. (Previously presented): A cellular proliferation assay for a compound acting through erbB-2 which comprises:
- i) providing a cell comprising erbB-2 and erbB-3 and which is responsive to ligand stimulated cell proliferation under conditions suitable for cell proliferation;
- ii) providing a first ligand which is a ligand for erbB-3 capable of inducing proliferation by the cell;
  - iii) contacting i) and ii) in the presence and absence of a compound; and
- iv) determining whether the compound has any effect on reducing cell proliferation.
- Claim 2. (Original): A cellular proliferation assay according to claim 1 comprising the addition of a control wherein the compound is tested in parallel in the absence of ligand to detect non-specific cell toxicity.
- Claim 3. (Withdrawn): A cellular proliferation assay according to claim 1 or 2 further comprising:
- i) providing a second cell comprising erbB-2, erbB-3 and EGFR under conditions suitable for cell proliferation;
- ii) a second ligand which is a ligand for EGFR capable of inducing proliferation by the second cell;
  - iii) contacting i) and ii) in the presence and absence of a compound; and
- iv) determining whether the compound has any effect on reducing cell proliferation.
- Claim 4. (Withdrawn): A cellular proliferation assay according to claims 1 or 2 wherein the cell endogenously expresses EGFR and/or erbB-2 and/or erbB-3.
- Claim 5. (Withdrawn): A cellular proliferation assay according to claim 4 wherein the cell endogenously expresses EGFR, erbB-2 and erbB-3.
- Claim 6. (Previously presented): A cellular proliferation assay according to claim 1 wherein the first ligand is a heregulin.

Claim 7. (Original): A cellular proliferation assay according to claim 6 wherein the first ligand is heregulin  $\beta$ 1.

Claim 8. (Withdrawn): A cellular proliferation assay according to claim 3 wherein the second ligand is EGF.

Claim 9. (Currently amended): A cellular proliferation assay according to <u>claim 1 claims 1 or</u> 3-wherein the cell is an immortalised normal epithelial H16N-2 cell.

Claim 10. (Currently amended): A cellular proliferation assay according to <u>claim 1 claims 1 or 3</u>-wherein the cell is a MCF-7 cell.
